

# ○ Automatic Personnel Identification

## A Capabilities Overview

Unauthorized entry or employees removing assets without permission can result in theft, personal endangerment and other serious security concerns. The Automatic Personnel Identification System (APID) from AXCESS<sup>®</sup> Inc. provides hands-free access control and advanced personnel monitoring.

The APID System from AXCESS is the flexible solution for:

- ¥ Access Control
- ¥ Personnel Tracking
- ¥ Time and Attendance
- ¥ Compliance Monitoring
- ¥ Marshalling and Mustering
- ¥ Guard Tour

Using active RFID technology, AXCESS Inc.'s APID System provides a non-invasive means of monitoring personnel movements throughout your facility.

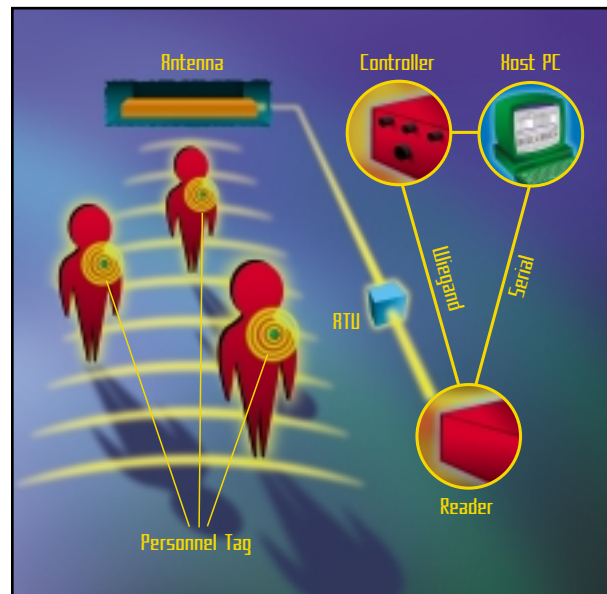

## Unique Features

**Automatic Hands-Free Operation** - employees and residents appreciate the convenience of no buttons to push or cards to swipe

**Flexible Coverage Zone** - may be configured for short range or broad coverage areas for ease of operation and a discreet, aesthetically pleasing installation

**Multi-Tag Read** - simultaneously identifies multiple tags for continuous personnel traffic flow during shift changes and other peak traffic periods

**Read/Write Capability** - personnel information can be written to and stored in tag memory for various user defined applications (available 3rd quarter 1999)

## How The System Works

The AXCESS APID System is comprised of radio frequency tags and readers. The Personnel Tags are small transmitter/receivers that communicate with the reader through an antenna located next to the doorway or covertly installed inside a ceiling, wall or picture frame.

AXCESS Readers are installed at strategic locations throughout the facility. Readers can be configured to read a specific doorway or portal, or extended to monitor a broad coverage zone. Tag data is read and forwarded to a host computer. Application software, such as our own Secure Monitor<sup>®</sup>, logs the event into a database. Host systems can also be configured to trigger a CCTV camera or sound an alarm to alert security personnel.

## The Future

With technology constantly changing and advancing, AXCESS Inc. realizes the importance of ongoing research and development to assure its customers the most up-to-date and innovative solutions. Future plans include enhancements to Secure Monitor<sup>®</sup> software in support of additional product applications.
