

Access Security Integrator Pelco DVR Integration

Access Security Integrator now provides full integration with Pelco's DX8000, DX8100 and Endura series DVR's. User-definable access control events, such as specific card holder transactions, alarm types, conditions, etc. can trigger DVR responses which include video recording, still image capture and specific camera presets. In addition, any event that creates a DVR response shall be represented by a camera icon within the transaction screen of Access Security Integrator.

User's can call up the stored video or image file from within the access control program to compare it against stored photographs within the application. All video clips and captured images can be saved to a user-definable location for viewing at any time. The configuration is quick and easy, allowing customers to manage both systems on the same workstation. This option is included with new Pelco DVR purchases and can be added to systems with existing DVR's.

Advanced Integration Provides Complete Control

- Full integration with ASI 2000 versions 3.4.0 or later
- Supports Pelco's DX8000, DX8100 and Endura Series DVR's
- Link Access Control Events to DVR Responses
- View Recorded Video within Transaction Monitor
- Easy to Set Up and Configure
